PROFESSIONAL SUMMARY

Application security engineer who tests web apps and APIs for access control, authentication and injection flaws, and writes CVSS v3.1 findings with remediation recommendations. Tests LLM and tool-using agents for prompt injection, RAG data leaks and excessive agency, mapped to the OWASP LLM Top 10 and verified in CI. A software engineering background helps read code and trace findings to the root cause. Open to Application Security, Product Security and AI Security roles, remote or in Ghana.

CORE SKILLS

Offensive and AppSec testing: Burp Suite, Nmap, Kali Linux, SQL injection, IDOR and access control testing, authentication testing

AI/LLM Security: OWASP LLM Top 10, prompt injection, RAG security, tool and agent permission testing

Cloud and Detection: AWS, CloudTrail, Terraform, Checkov, MITRE ATT&CK

Frameworks: OWASP Top 10, OWASP API Security Top 10, CVSS v3.1, PTES, threat modeling

Languages: TypeScript, Python, SQL, React, Next.js

SECURITY PROJECTS

LLM & Tool-Using Agent Security Lab

- Built a vulnerable-vs-hardened RAG and tool-calling support agent in TypeScript and tested five OWASP LLM Top 10 (2025) attack paths, including indirect prompt injection, cross-tenant RAG leaks and excessive agency.
- Verified the hardened controls in CI, confirming each path is blocked in hardened mode and reproducible in vulnerable mode.

Healthcare Portal Pentest (NetworkWalks Training Lab)

- Chained recon, username enumeration and a SQL injection login bypass on a simulated hospital portal, then reached restricted documents.
- Scored each finding with CVSS v3.1, mapped it to the OWASP Top 10 following PTES, and wrote a report with remediation recommendations.

AWS Threat Detection as Code

- Wrote six Terraform detections for risky AWS activity, including root account use and CloudTrail tampering, and mapped each rule to a MITRE ATT&CK technique.
- Configured CloudTrail and GuardDuty to feed EventBridge rules that alert through Lambda, and ran terraform validate and Checkov scans in CI.

Ghostpass

- Threat-modeled an unlinkable API payment design against timing correlation, replay and metadata leaks.
- Documented the attack surface and mitigations for the protocol design.

External OSINT and Network Recon Assessment

- Mapped an authorized target's public footprint and open services using DNS lookups, WAF detection, OSINT tools and Nmap.

Offline Password Recovery Assessment

- Recovered passwords from lab sample PDFs with John the Ripper and tried an AI-assisted workflow over MCP.

SECURITY EXPERIENCE

Cybersecurity Intern, Ethical Hacking and SOC tracks | TechBiz Security Sep 2026 to Present

- Completes parallel six-week tracks covering web and network penetration testing, exploitation, SIEM and log analysis, alert triage, threat detection and incident response.
- Produces security assessment reports as part of the program.

Cybersecurity Intern | NetworkWalks Aug 2026 to Sep 2026

- Authored a CVSS v3.1 pentest report covering a SQL injection login bypass, mapped findings to the OWASP Top 10 and followed PTES.
- Completed an authorized OSINT and network recon assessment and recovered passwords from lab sample PDFs with John the Ripper.

Research Intern, LLM Operations | DataMaker, Adenta Accra Aug 2024 to Jan 2025

- Evaluated large language model outputs for quality, logical reasoning and failure cases, and flagged inconsistencies.
- Labeled and sanitized training datasets.

ENGINEERING EXPERIENCE

Frontend Engineer | Synchora Health Feb 2025 to Present

- Implements role-based access in the UI so staff only see the views and actions for their role.
- Handles form input and validation across patient and staff workflows.

Frontend Designer | Gigsama Oct 2025 to Oct 2026

- Designed interfaces in Figma and built them in Next.js, React and Tailwind CSS.
- Integrated a third-party CMS and blog management system into an application.

Freelance IT Consultant & Web Developer | Self-employed Jul 2025 to Present

- Builds and deploys web applications for small businesses, and manages client accounts, backups and access controls.
- Advises small businesses on cloud readiness, network setup and baseline security, and performs technical security checks and system hardening.

Regional Ambassador | ICP Ghana (Internet Computer) Feb 2024 to Dec 2024

- Led technical sessions on application security, smart contract security and backend architecture across eight Ghanaian universities.

CERTIFICATIONS

AWS Certified Cloud Practitioner (2026) | Google Cybersecurity Professional Certificate (2026)

In progress: Cisco Ethical Hacker (Cisco Networking Academy) and PortSwigger Web Security Academy

Also: Meta Database Engineer Certificate (2025) and Google Data Analytics Professional Certificate (2025)

EDUCATION

BSc, Information Technology Management Jan 2022 to Oct 2025

University of Professional Studies, Accra (UPSA)
